- MAINTENANCE SHEET -

COMÉTAL ALUMINUM LOUVERS, PENTHOUSES, VENTILATION GRILLES, VISUAL SCREENS AND SUNSHADES

Cométal aluminum louvers, penthouses, ventilation grilles, visual screens and sunshades do not require any special maintenance, given the stability of the materials used in their assembly.

Mill finish or enameled aluminum louvers, penthouses, ventilation grilles, visual screens, and sunshades

Cleaning:

Mill finish or enameled louvers, penthouses, ventilation grilles, visual screens and sunshades can be cleaned as needed. Use a soft bristle wash brush (like those used in the automotive industry) and water. Enameled finish requires special attention because it is fragile. If heavy cleaning is needed, a non-abrasive household detergent diluted in water is recommended.

Anodized aluminum louvers, penthouses, ventilation grilles, visual screens, and sunshades

Cleaning:

Anodized louvers, penthouses, ventilation grilles, visual screens and sunshades can be cleaned as needed. Use a soft bristle wash brush (like those used in the automotive industry) and water, with or without a non-abrasive household detergent. To remove slight scratches and restore the anodic film, gently polish with a clean cloth and an abrasive paste such as OXAWAY (# P12101).

Snow and ice load

Warning:

Although sunshades are designed to withstand the snow and ice loads set out in the National Building Code, it is important to ensure that accumulation is minimal. Snow removal or de-icing must be done quickly and with great care to avoid damaging the aluminum or the finish.

NOTE :

Improper maintenance can void the manufacturer's warranty.
